# EEE104 – Digital Electronics (I) Lecture 2

Dr. Ming Xu

Dept of Electrical & Electronic Engineering

XJTLU

#### In This Session

- Binary numbers
- · Conversion between decimal and binary numbers
- Binary arithmetic

2

#### **Decimal Numbers**

- The decimal numbering system has ten digits: 0-9
- Digits at different positions are assigned different **weights** which are powers of ten.
- The value of a decimal number is the sum of the weighted digits.

$$47 = (4 \times 10^{1}) + (7 \times 10^{0})$$
  
=  $(4 \times 10) + (7 \times 1) = 40 + 7$ 

## **Binary Numbers**

r <u>ali de la licita</u>								
Decimal Number	Binary Number							
0.	0	0	0	0				
1	0	0	0	1				
2	0	0	1	0				
3	0	0	1	1				
4	0	1	0	0				
5	0	1	0	1				
. 6	0	1	1	0				
7	0	1	1	1				
8	1	0	0	0				
9	1	0	0	1				
10	1	0	1	0				
11	1	0	1	1				
12	1	1	0	0				
13	1	1	0	1				
14	1	1	1	0				
15	1	1	1	1				

Counting in binary

- 1. Begin counting: 0, 1.
- 2. Include another bit position and continue: 10, 11.
- 3. Include a third bit position and continue: 100, 101, 110, 111.

3

4

## **Binary Numbers**

- In decimal numbering system, with n digits you can count up to a number 10<sup>n</sup> 1. e.g.
  - 1 digit for  $10^1 1 = 9$
  - 2 digits for  $10^2 1 = 99$
- In binary numbering system, with n bits you can count up to a number 2<sup>n</sup> – 1. e.g.
  - 2 bits for  $2^2 1 = 3$
  - 3 bits for  $2^3 1 = 7$
  - 4 bits for  $2^4 1 = 15$
  - 5 bits for  $2^5 1 = 31$

5

## Binary-to Decimal Conversion

Add the weights of all bits that are 1.

Weight: 
$$2^6 \ 2^5 \ 2^4 \ 2^3 \ 2^2 \ 2^1 \ 2^0$$
  
Binary number:  $1 \ 1 \ 0 \ 1 \ 1 \ 0 \ 1$   
 $1101101 = 2^6 + 2^5 + 2^3 + 2^2 + 2^0$   
 $= 64 + 32 + 8 + 4 + 1 = 109$ 

Weight: 
$$2^{-1} 2^{-2} 2^{-3} 2^{-4}$$
  
Binary number: 0 . 1 0 1 1  
 $0.1011 = 2^{-1} + 2^{-3} + 2^{-4}$   
 $= 0.5 + 0.125 + 0.0625 = 0.6875$ 

## **Binary Numbers**

The weighting structure

$$2^{n-1} \dots 2^3 \ 2^2 \ 2^1 \ 2^0 \dots 2^{-1} \ 2^{-2} \dots 2^{-n}$$

Binary point

- 1. Least significant bit (LSB): the right-most bit in a binary number.
- **2. Most significant bit (MSB)**: the left-most bit in a binary number.

#### Binary weights.

2 <sup>8</sup>	Posit 2 <sup>7</sup>	ive Pov 2 <sup>6</sup>	vers of 2 <sup>5</sup>	Two (v			rs) 2 <sup>1</sup>	20	2-1		e Powers 2 <sup>-3</sup>		ectional num 2 <sup>-5</sup>	tber) 2 <sup>-6</sup>
256	128	64	32	16	8	4	2	1	1/2 0.5	1/4 0.25	1/8 0.125	1/16 0.0625	1/32 0.03125	1/64 0.015625

## **Decimal-to-Binary Conversion**

#### Sum-of-weight method

- 1. Find the greatest weight which is less than or equal to the number.
- 2. Subtract the weight from the number, and find the greatest weight which is less than or equal to the remainder.
- 3. Repeat this process until the remainder becomes zero.

$$12 = 8 + 4 = 2^{3} + 2^{2} \longrightarrow 1100$$

$$25 = 16 + 8 + 1 = 2^{4} + 2^{3} + 2^{0} \longrightarrow 11001$$

$$58 = 32 + 16 + 8 + 2 = 2^{5} + 2^{4} + 2^{3} + 2^{1} \longrightarrow 111010$$

$$82 = 64 + 16 + 2 = 2^{6} + 2^{4} + 2^{1} \longrightarrow 1010010$$

## **Decimal-to-Binary Conversion**

#### Repeated division-by-2 method for whole numbers

- 1. Divide the number by 2.
- 2. Repeat dividing the resultant quotient by 2 until a zero quotient is produced.
- 3. The remainders generated by the divisions form the binary number.
- 4. The first remainder is the least significant bit (LSB).

9

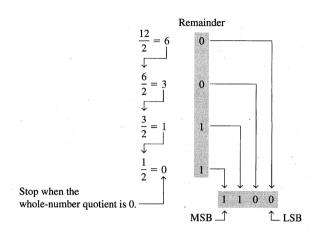

## Decimal-to-Binary Conversion

#### Repeated multiplication by 2 for fractions

- 1. Multiply the number by 2.
- 2. Repeat multiplying the resultant fractional part of the product by 2 until the fractional product is zero or until the desired number of decimal places is reached..
- 3. The carries generated by the multiplications form the binary number.
- 4. The first carry is the most significant bit (MSB).

## **Decimal-to-Binary Conversion**

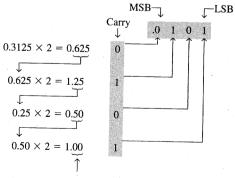

#### Repeated division-by-2 method for whole numbers

10

#### **Decimal-to-Binary Conversion**

#### Repeated multiplication by 2 for fractions

Continue to the desired number of decimal places or stop when the fractional part is all zeros.

## **Binary Arithmetic**

#### **Binary Addition**

$$0+0=0$$
 Sum of 0 with a carry of 0  
 $0+1=1$  Sum of 1 with a carry of 0  
 $1+0=1$  Sum of 1 with a carry of 0  
 $1+1=10$  Sum of 0 with a carry of 1  
 $1+1+1=11$  Sum of 1 with a carry of 1

(a) 
$$11$$
 3 (b)  $100$  4  $+11$   $110$   $\frac{+3}{6}$   $\frac{+10}{110}$   $\frac{+2}{6}$ 

## **Binary Arithmetic**

#### **Binary Subtraction**

$$0-0=0$$
  
 $1-1=0$   
 $1-0=1$   
 $10-1=1$   $0-1$  with a borrow of 1

13

## **Binary Arithmetic**

#### **Binary Multiplication**

$$0 \times 0 = 0$$
  
 $0 \times 1 = 0$   
 $1 \times 0 = 0$   
 $1 \times 1 = 1$ 

## **Binary Arithmetic**

#### **Binary Division**

Follow the same procedure as division in decimal.

(a) 
$$11)110$$
  $3)6$  (b)  $10)110$   $2)6$   $\frac{11}{000}$   $\frac{3}{0}$   $\frac{11}{000}$   $\frac{6}{0}$   $\frac{10}{10}$   $\frac{6}{0}$
